

MAX32650 Evaluation Kit

Evaluates: MAX32650–MAX32652

General Description

The MAX32650 EV kit provides a platform for evaluating the capabilities of the MAX32650 ultra-low power memory-scalable microcontroller designed specifically for high performance battery powered applications.

EV Kit Contents

- MAX32650 EV kit containing a MAX32650 with a preprogrammed demo
- JTAG debugger with ribbon cable
- Two standard A to Micro B USB cables

Ordering Information

PART	TYPE
MAX32650-EVKIT#	EV Kit

#Denotes RoHS compliant.

Benefits and Features

- 3.5in 320 x 240 Color TFT Display
- 64MB HyperRAM
- 64MB XIP Flash
- 1MB XIP RAM
- USB 2.0 Micro B Interface
- USB 2.0 Micro B to Serial UARTs
 - Selection with Jumpers Between UART0 and UART2
- Micro SD Card Interface
- Select GPIOs Accessed through 0.1in Header
- Access to the Four Analog Input Through 0.1in Header
- Arm® or SWD JTAG 20-Pin Header
- On-Board PMIC to Source Power for the MAX32650
- Board Power Provided by Either USB Port
- Individual Power Measurement on All IC Rails Through Jumpers
- On-Board 1.8V and 3.3V Regulators for Peripherals
- Two General-Purpose LEDs and Two General-Purpose Pushbutton Switches

Arm is a registered trademark of Arm Limited (or its subsidiaries) in the US and/or elsewhere.

MAX32650 EV Kit Board

Quick Start

Procedure

Follow the steps below to verify board operation:

- 1) While observing safe ESD practices, carefully remove the MAX32650 EV kit board out of its packaging. Quickly inspect the board to ensure that no damage occurred during shipment. Jumpers/shunts are pre-installed prior to testing and packaging.
- 2) The MAX32650 is preprogrammed with a demo program. To power up the board and run the demo. Verify that the board is powered up by observing that the blue LED (DS3) and the green LEDs (DS1 and DS2) are illuminated.
- 3) Once power is applied, the demo initiates and displays the Maxim logo upon successful completion.

Detailed Description of Hardware

Power Supply

The EV kit is powered by +5V and is made available through VBUS on the Micro-USB type-B connectors CN1 or CN2. This sources the MAX77650 PMIC that provides power to the MAX32650 rails. The board is default jumpered for power provided by CN1. A blue LED (DS3) illuminates when the board is powered. Green LEDs DS1 and DS2 illuminate when the 1V8 and 3V3 LDOs are powered, respectively. These are dedicated for sourcing power to the board peripherals.

Current Monitoring

Jumpers provide convenient current monitoring points for VRTC (J6), VDDIO (J7), VDDIOH (J8 or J11), VCORE (J9), VDDB (J10) and VDDA (J12).

Clocking

The IC nominally operates from an internal oscillator of 120MHz. Three other lower frequency oscillators can be selected depending on power needs. There is an internal 32.768 oscillator that requires an external 32.768kHz crystal (Y1), for accurate RTC timekeeping and USB operation.

Color TFT Display

The display provided is a 3.5in 320 x 240 color TFT. It has three-wire serial control, a 24-bit parallel RGB interface with a white LED backlight.

Universal Serial Bus

A USB Micro B connector (CN1) is provided for prototyping USB slave applications. The USB 2.0 full-speed interface (480Mbps) transceiver is embedded in the MAX32650.

UART Interfaces

The EV kit provides a USB-to-UART bridge chip, FTDI FT230X. This bridge eliminates the requirement for a physical RS-232 COM port. Instead, the IC's UART access is through the Micro-USB type-B connector, CN2. The USB-to-UART bridge can be connected to UART 0 or UART 2 of the IC with jumpers JP12 (RX), JP13 (TX), JP15 (CTS), and JP16 (RTS). Virtual COM port drivers and guides for installing Windows® drivers are available at the FTDI chip website.

Windows is a registered trademark and registered service mark of Microsoft Corporation.

Arm JTAG Connectors

The Arm standard 20-pin connector pinout is provided by shrouded header J4. JH6 is provided as an optional debugging access point, it is not populated by default. The JTAG debugger is supplied with the EV kit. JTAG logic levels are fixed to VDDIO (1.8V).

JTAG Serial Wire Debug (SWD) Support

SWD is supported by the IC and this EV kit. The port shares its clock (SWCLK) with JTAG TCK and a bidirectional data pin (SWDIO) is shared with JTAG TMS.

Reset Pushbutton

Pushbutton SW3 manually resets the MAX32650.

Indicator LEDs

The indicator LEDs D1 (red) and D2 (green) are connected to GPIO P2.25 and P2.26, respectively. The GPIOs need to be configured for 3.3V or open drain since they are sourced at 3.3V.

GPIO Pushbuttons

The two pushbuttons (SW2 and SW3) are connected to GPIO P2.28 and P2.30, respectively. If the pushbutton is pressed, the attached port pin is pulled low.

GPIO Headers

Select GPIOs are accessible through a 0.1in spaced header pins. The IC provides support for both 1.8V and 3.3V peripherals through power rails VDDIO and VDDIOH. GPIO voltages can be programmed on pin-by-pin basis. Refer to the IC's operating guide for more detail.

VIO_REF Setting

The VIO_REF voltage is set by jumper JP14 and was originally selectable between VDDIO and VDDIOH. This, however, can place 3.3V on the pullup (R1) on RSTN and cause an extra $\sim 2\mu\text{A}$ of current to be driven in RSTN. To prevent this, JP14 position 3 has been clipped and VIO_REF jumpered to VDDIO.

Table 1. Jumper Settings

JUMPER	SIGNAL	SETTINGS	DESCRIPTION
JP1	32KIN	1-2*	Connects 32KIN to the 32.768kHz crystal
		Open	Disconnects 32KIN to the 32.768kHz crystal
JP2	AIN3	1-2	Connects analog header TP1 to AIN3
		2-3	Connects PMIC_AMUX TP1 to AIN3
JP3	P2_8	1-2*	Connects 1.8V pullup to P2_8
		2-3*	Connects 3.3V pullup to P2_8
JP4	P2.17	1-2	Connects 1.8V pullup to P2.17
		2-3	Connects 3.3V pullup to P2.17
JP5	P2.18	1-2	Connects 1.8V pullup to P2.18
		2-3	Connects 3.3V pullup to P2.18
JP6	P2.7	1-2	Connects 1.8V pullup to P2.7
		2-3	Connects 3.3V pullup to P2.7

*Denotes default setting.

Table 1. Jumper Settings (continued)

JUMPER	SIGNAL	SETTINGS	DESCRIPTION
JP7	P2.25	1-2*	Connects LED D1 to P2.25
		Open	Disconnects LED D1 to P2.25
JP8	P2.26	1-2*	Connects LED D2 to P2.26
		Open	Disconnects LED D2 to P2.26
JP9	RAM XIP VCC	1-2*	Connects 1V8_AUX to RAM XIP VCC
		Open	Disconnects 1V8_AUX to RAM XIP VCC
JP10	FLASH XIP VCC	1-2*	Connects 1V8_AUX to FLASH XIP VCC
		Open	Disconnects 1V8_AUX to FLASH XIP VCC
JP11	VBUS	1-2	Connects USB port to VBUS
		2-3*	Connects USB-UART port to VBUS
JP12	TXD of USB-Serial IC	1-2*	Connects TXD of USB-Serial IC to P2.11 (UART0_RX)
		2-3	Connects TXD of USB-Serial IC to P2.1 (UART2_RX)
JP13	RXD of USB-Serial IC	1-2*	Connects RXD of USB-Serial IC to P2.12 (UART0_TX)
		2-3	Connects RXD of USB-Serial IC to P1.10 (UART2_TX)
JP14	VIO_REF	1-2*	Connects VDDIO to VIO_REF
		2-3	Connects VDDIOH to VIO_REF
JP15	RTS of USB-Serial IC	1-2*	Connects RTS of USB-Serial IC to P2.9 (UART0_CTS0)
		2-3	Connects RTS of USB-Serial IC to P1.7 (UART2_CTS2)
JP16	CTS of USB-Serial IC	1-2*	Connects CTS of USB-Serial IC to P2.10 (UART0_RTS0)
		2-3	Connects CTS of USB-Serial IC to P1.8 (UART2_RTS2)
JP17	VDDA	1-2	Connects VDDA to LDO of the PMIC
		2-3*	Connects VDDA to SSB0 of the PMIC
JP18	TXD of USB-Serial IC	1-2*	Connects TXD of USB-Serial IC to JP12 RX SEL jumper
		Open	Disconnects TXD of USB-Serial IC to JP12 RX SEL Jumper
JP19	RXD of USB-Serial IC	1-2*	Connects RXD of USB-Serial IC to JP13 TX SEL Jumper
		Open	Disconnects RXD of USB-Serial IC to JP13 TX SEL Jumper
JP20	HyperRAM VCC	1-2*	Connects 1V8_AUX to VCC Hyper RAM VCC
		Open	Disconnects 1V8_AUX to VCC Hyper RAM VCC
JP21	3V3 LDO VCC	1-2*	Connects PMIC SYS to 3V3 LDO
		Open	Connects VBUS to 3V3 LDO
JP22	HyperRAM VCCQ	1-2*	Connects 1V8_AUX to VCC Hyper RAM VCCQ
		Open	Disconnects 1V8_AUX to VCC Hyper RAM VCCQ
JP23	VRTC	1-2*	Connects PMIC SBB0 to VRTC
		Open	Disconnects PMIC SBB0 to VRTC
JP24	VDDIO	1-2*	Connects PMIC SBB0 to VDDIO
		Open	Disconnects PMIC SBB0 to VDDIO

*Denotes default setting.

Table 1. Jumper Settings (continued)

JUMPER	SIGNAL	SETTINGS	DESCRIPTION
JP25	N/A	N/A	Jumper not present
		N/A	Jumper not present
JP26	VCORE	1-2*	Connects PMIC SBB1 to VCORE
		Open	Disconnects PMIC SBB1 to VCORE
JP27	VDDB	1-2*	Connects PMIC SBB2 to VDDB
		Open	Disconnects PMIC SBB2 to VDDB
JP28	VDDIOH	1-2*	Connects PMIC power to VDDIOH
		Open	Disconnects PMIC power to VDDIOH
JP29	VDDIOH	1-2*	Connects PMIC SBB0 (1.8V) to VDDIOH
		2-3	Disconnects PMIC SBB2 (3.3V) to VDDIOH
JP30	VDDA	1-2*	Connects PMIC power (LDO or SSB0) to VDDA
		Open	Disconnects PMIC power (LDO or SSB0) to VDDA

*Denotes default setting.
